NATURAL MATERIALS

An I-Wood Denmark® panel is a natural product in the best and most classic sense of the word. Sorting will therefore always be reflected in the natural character of the wood. Each piece of wood has its own expression and unique grain. Therefore, you can expect variation in the colour and expression of the wood. Our pictures are indicative.

TEMPERATURE

I-Wood Denmark® DivideWalls must be stored in a dry, warm, plain place. This will ensure a safe, consistent humidity level of approx. 4-10%. The room where your new wood panels are to be installed must also be dry and warm – and heated to approx. 17-21 degrees. We recommend a humidity level of about 30-60%.

MAINTENANCE

I-Wood Denmark® products require minimal maintenance, as they are natural products. We simply recommend dusting the products as needed. Natural products can over time vary in expression and colour depending on the individual product and environment.

Notes: ⁽¹⁾ The weight may vary depending on the variant, size, etc ⁽⁴⁾ Complies with the limit for ChemVerbotsV (E05)
